Project Rules

Ground Rules

- We treat each other with respect. No talking down, no shooting down ideas
- We keep things friendly but professional
- We give constructive feedback on the work, not the person, and we receive it without getting defensive
- We recognize good work out loud, vocalize positive feedback

Team Meetings

- We hold at least one weekly check-in voice/video call
 - o Monday nights
- Takes side notes in case someone can't make a meeting
- Let other team members know if you won't be making it for a call at least a few hours ahead (preferably more)

Communication and Decision-Making

- Communicate openly, no hidden agendas, no passive-aggressive messages
- We respond to direct messages within 24 hours, even if it's just a quick acknowledgement or "thumbs up"
- We listen with an open mind and decide as a group. Once decided, we all back the decision
- Big decisions (scope changes, tech choices, deadlines) are made as a full group

Coding Conventions

- Use *camelCase* for local variables and parameters (e.g., orderTotal, menuItemId)
- Use *PascalCase* for classes, methods, and public members (e.g., OrderService, CalculateTotal)
- Use **meaningful names**. "x", "data", "temp", etc. are banned unless truly trivial (e.g. for() loops)
- Keep naming consistent across the project. If it's "MenuItem" in one file, it's "MenuItem" everywhere
- Ensure teammates are staying within the scope of their user story, not creeping into other user stories.

- Ensure each pull request is peer reviewed by at least one other, preferably 2 teammates.
- Maintain proper documentation of code, whether it be functions, methods, classes, as well as Git commits and pushes.
- Naming of GitHub Branches should include the number and name of the corresponding Jira work order being completed.
- Ensure the project works with all other code already pushed in the project prior to pushing your work to the Main branch
